| HOW TO PLAY:             | Players are given 4 cards each.  
                          Using any of the four operations (division, multiplication, addition, 
                          subtraction) the player tries to make a total of 20.  
                          All 4 cards must be used once.  
                          If the player makes exactly 20 they score 10 bonus points for making 20 
                          plus their score of 20 (30 altogether).  
                          The next player has his/her turn.  
                          If they are unable to make 20, their score is the number they made that is 
                          less than 20.  
                          Play continues with players trying to make 20 with another four cards.  
                          After each turn the scores are added to the player’s total.  
                          The first player to reach 200 is the winner. |
